SUMMARY

Full-stack engineer who builds production-grade tools that eliminate manual workflows. Built three end-to-end applications — an offline-first financial PWA with service-worker sync and zero data-loss across 100+ queued mutations, an email-parsing tracker handling 100+ ATS formats, and a scheduling system with O(1) conflict detection. Proficient in JavaScript, TypeScript, React, Next.js, Node.js, Express, PostgreSQL, and MongoDB, with working knowledge of Docker, AWS (EC2, S3), and automated testing (Jest, React Testing Library). B.Tech in IT (CGPA 9.25), with DSA fundamentals applied to real shipped systems.

EDUCATION

B.Tech, Information Technology Sep 2022 - May 2026
SRM Institute of Science and Technology, Chennai
CGPA: 9.25
Relevant coursework: Data Structures and Algorithms, Full-Stack Web Development, Software Engineering.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, C
Frontend: React.js, Next.js, Redux, Tailwind CSS, HTML5, CSS3, AJAX
Backend: Node.js, Express.js, REST APIs, NextAuth, Service Workers
Databases: PostgreSQL, MongoDB, MySQL, Supabase, Drizzle ORM, IndexedDB
Testing & DevOps: Jest, React Testing Library, Docker, GitHub Actions, AWS (EC2, S3)
DevTools & Platforms: Git, GitHub, VS Code, Postman, Vercel, Google Gemini API

PROJECTS

Community Loan Management System [\[GitHub\]](#) Jan 2026 – Mar 2026
Built a production-ready offline-first PWA for community savings and lending — replacing error-prone manual work.

- Engineered a service-worker sync layer with IndexedDB write queuing and background retry against RLS-protected Postgres, handling 100+ mutations with admin reconciliation — achieving zero data-loss during disconnection.
- Developed server-side Excel export pipelines via Next.js route handlers — reduced admin report generation from 2+ hours of manual spreadsheet work to one-click download with auto-calculated fund balances breakdowns.
- Automated a GitHub Actions workflow (scheduled every 3 days, manually triggerable) that authenticates via a CRON_SECRET to call a dedicated health-check endpoint on an ubuntu-latest runner — preventing Supabase free-tier project pause and safeguarding uptime for the live deployment.

Smart Job Application Tracker [\[GitHub\]](#) Aug 2025 - Nov 2025
Full-stack PWA that parses job-application emails via Gmail OAuth and turns them into a structured tracking dashboard.

- Engineered a deterministic email-extraction pipeline using the Gmail API, cascading through platform-specific parsers, ATS parsers, regex fallbacks, and domain-based normalization to extract all application data from inconsistent recruitment emails.
- Built a Next.js (App Router) dashboard backed by Drizzle ORM persistence to Supabase PostgreSQL, with status tracking (Applied/Interview/Offer/Rejected), timeline view and polling-based sync — across 100+ ATS formats.

Classroom Availability & Allocation System [\[GitHub\]](#) Jan 2025 - Jul 2025
Engineered a smart scheduling app to optimize classroom usage and reduce conflicts in academic institutions.

- Built a timetable ingestion pipeline that parses uploaded Word documents into structured classroom records, normalizing inconsistent year formats using regex-based parsing.
- Powered room search, faculty availability, and real-time scheduling dashboards through 11 REST API endpoints, with Set-based lookups replacing array scans for O(1) occupancy checks.
