SUMMARY

Software developer building full-stack applications with React, JavaScript, Node.js, and MongoDB, alongside systems programming in C++ and Python. Has independently designed and shipped three complete applications across different domains (Financial tracking, Scheduling, and Productivity tooling), handling everything from database design to deployed UI. Most recently built a financial tracking system actively used by 40+ community members, managing 10 Million+ in tracked loans and payments.

EDUCATION

B.Tech, Information Technology

Sep 2022 - May 2026

SRM Institute of Science and Technology, Chennai

9.28

Relevant coursework: Data Structures and Algorithms, Full-Stack Web Development, Software Engineering, Machine Learning, Artificial Intelligence, Database and Management.

TECHNICAL SKILLS

Programming Languages: JavaScript, C++, Python, C

Web Development: React.js, Node.js, CSS, HTML, REST APIs, PWA, Responsive Design

Software Tools: GitHub, VS Code, Postman

Database Management: MongoDB, MySQL

PROJECTS

Community Loan Management System

Jan 2026 – Mar 2026

Built a full-stack Progressive Web Application to automate community loan management for 40+ active borrowers.

- Designed a responsive admin dashboard for loan management, enabling administrators to track loan disbursements, EMI collection progress, repayment status, top-up loans, and key financial metrics.
- Engineered a multi-tier balance recovery mechanism using a prioritized fallback chain to reconstruct monthly loan balances when historical records were incomplete or inconsistent.
- Implemented a financial calculation engine that carries forward unpaid payments across billing periods.

Smart Job Application Tracker

Aug 2025 - Nov 2025

Full-stack PWA that parses job-application emails via Gmail OAuth and turns them into a structured tracking dashboard.

- Automated detection and classification of application-related emails via Gmail integration, eliminating manual entry of each application's status.
- Delivered advanced analytics dashboards views surfacing response rates and application-stage.

Classroom Availability & Allocation System

Jan 2025 - Jul 2025

Engineered a smart scheduling app to optimize classroom usage and reduce conflicts in academic institutions.

- Built a timetable ingestion pipeline that parses uploaded Word documents into structured classroom records, normalizing inconsistent year formats using regex-based parsing.
- Powered room search, faculty availability, and real-time scheduling dashboards through 11 REST API endpoints, with Set-based lookups replacing array scans for $O(1)$ occupancy checks.

PROFESSIONAL EXPERIENCE

Freelance Projects, Remote: Front-End Developer

Jan 2026 - Mar 2026

- Replaced a manual record-keeping process with a web application backed by a relational data model and role-based access control.
- Designed the admin interface around a small set of core actions, keeping business logic and validation on the backend rather than exposed in the UI

OTHER WORK EXPERIENCE

Academic Projects, SRM IST: Project Lead – Front-End Development

Jan 2025 - Jul 2025

- Led a 4-member team and crafted a high-speed availability engine that accelerated room–faculty search by 60% for a university-wide classroom management platform.
