SUMMARY

Aspiring Software Engineer with a B.Tech in IT (CGPA: 9.25/10), proficient in JavaScript, React.js, Node.js, Express, and C++. A self-driven problem solver who takes ownership from idea to deployment — built and deployed an API failure simulation platform for resilience testing and a financial workflow application serving 40+ community borrowers. Thrives in collaborative environments with strong communication, adaptability, and a continuous learning mindset.

EDUCATION

B.Tech, Information Technology

Sep 2022 - May 2026

SRM Institute of Science and Technology, Chennai

CGPA : 9.25/10

Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Python, C

Frontend: React.js, Redux, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Microservices, REST API development

Databases: PostgreSQL, MongoDB, MySQL

Tools & Methodologies: Git, GitHub, GitHub Actions, CI/CD, Postman, Agile, Vercel

PROJECTS

API Failure Simulation & Resilience-Testing Platform [GitHub] [Live]

Aug 2026 — Sep 2026

Platform for simulating API failures to test application resilience without impacting upstream services.

- Engineered a proxy-based failure injection engine supporting 15 failure modes — HTTP 4xx/5xx, timeout, connection drop, malformed JSON, and empty response — with conditional trigger matching and deterministic seeded randomness (32-bit LCG) to make probability-based failures fully reproducible and resilience test workflows.
- Designed a multi-step recovery workflow engine that sequences ordered failure steps (HTTP 401 → HTTP 429 → success), persisting each attempt independently; built execution replay-with-overrides and side-by-side comparison (status, latency, response diff) to diagnose behavioral changes without reconstructing requests manually.

Community Loan Management System [GitHub] [Live]

Jan 2026 — Mar 2026

Full-stack Progressive Web Application to automate community loan management for 40+ active borrowers.

- Architected a centralized admin dashboard displaying real-time EMI collection status, pending payments, top-up loan tracking, additional principal payments, and overall loan portfolio insights for full financial visibility.
- Automated cash bill generation and monthly billing cycles, eliminating manual spreadsheet reconciliation and reducing financial oversight time by an estimated 3 hours/week.

Classroom Availability & Allocation System [GitHub] [Live]

Jun 2025 — Jul 2025

Eliminate hallway wandering — instant classroom, lab, and faculty availability checks without physical verification.

- Engineered multi-resource search workflows — Class rooms, projector-equipped spaces, and faculty — querying schedules across 8 periods; returns occupancy context for taken slots and suggests an alternative free resource.
- Optimized availability lookups by replacing linear scans with Set-based data structures for O(1) occupancy checks across room-suggestion and faculty-search features — reducing manual search time by 80%.
